1. System Overview

The [Client] Outbound Campaign System is an automated lead generation and multi-stakeholder email outreach solution designed for recruiting and HR-tech sales. It combines LinkedIn job scraping, multi-level email finding, intelligent path routing, and staged escalation into a unified workflow. The system runs on n8n automation with data stored in Google Sheets and outreach managed through Instantly.

Key Components

- **Job Scraper:** Automatically scrapes LinkedIn for job postings matching your hiring signals
- **Qualification Engine:** Filters leads by employment type, employee count, and number of applicants
- **Email Finder:** Locates emails for up to 4 stakeholders per company: Job Poster (JP), Functional Head (FH), CHRO, and Founder
- **Path Router:** Assigns each lead to one of 15 outreach paths based on stakeholder availability
- **Campaign Manager:** Enrolls leads into Instantly campaigns with full personalization variables
- **Escalation Engine:** Automatically escalates to higher-level stakeholders after 10 days of no reply

How It Works

1. You create hiring signals (job search criteria) in the Google Sheet
2. The LinkedIn Scraper runs and pulls matching job postings
3. The Qualification workflow filters leads by employee count, employment type, and applicant count
4. The Email Finder workflows locate email addresses for JP, FH, CHRO, and Founder
5. The Add Leads to Campaigns workflow determines which of 15 paths applies and enrolls Stage 1 contacts into Instantly
6. The Escalation workflow monitors for replies and escalates to CHRO/Founder after 10 days of no response

The 4-Stakeholder Model

For every lead (job posting), the system identifies up to 4 stakeholders within the hiring company:

Stakeholder	Who They Are	How Found
JP (Job Poster)	The person who posted the job on LinkedIn	Scraped directly from the LinkedIn posting
FH (Functional Head)	The department head relevant to the job function	Found via email finder using the job function category
CHRO	The Chief Human Resources Officer or senior HR leader	Found via email finder searching HR leadership titles

Founder	The company founder or CEO	Found via email finder searching founder/CEO titles
---------	----------------------------	---

2. Prerequisites & Accounts Required

Before starting, ensure you have the following accounts set up and configured:

Account	Purpose	What You Need
Instantly.ai	Email outreach platform	Active account, campaign creation access, API key
AnyMail Finder	Email discovery for all stakeholders	API key and sufficient credits
n8n	Automation platform (self-hosted)	Running instance with all workflows imported
Google Sheets	Central data store	OAuth access configured in n8n
LinkedIn	Job posting source	Active account for building search URLs
Apify	LinkedIn job scraping service	API key and credits for the LinkedIn scraper actor

3. Account Setup & Configuration

Step 1: Set Up Instantly

7. Log in to instantly.ai
8. Navigate to Campaigns and create 4 campaigns (one per stakeholder type):
 - JP Campaign (for all Job Poster outreach)
 - FH Campaign (for all Functional Head outreach)
 - CHRO Campaign (for all CHRO outreach)
 - Founder Campaign (for all Founder outreach)
9. Copy the Campaign ID from each campaign's URL or Settings tab
10. Add the custom variables listed in Section 4 to each campaign

Step 2: Set Up n8n Credentials

11. In n8n, go to Settings > Credentials
12. Add Google Sheets OAuth2 credential
13. Add Instantly API credential (or HTTP Header Auth with your API key)
14. Add AnyMail Finder API credential
15. Verify all credentials by testing connectivity

Step 3: Import Workflows

Import the following workflows into n8n in order:

16. Run LinkedIn Scraper
17. Run Qualification
18. Find out JP Emails
19. Find out FH Emails
20. Find out CHRO Emails
21. Find out Founder Emails
22. Add Leads to Campaigns (15-path workflow)
23. Escalation Flow
24. Refresh Campaigns List
25. Map Campaign Fields

4. Creating Campaigns in Instantly

The 4-Campaign Architecture

Instead of creating separate campaigns for each outreach path, the system uses exactly 4 campaigns — one per stakeholder type. All personalization is handled through Instantly's Liquid Syntax conditional variables.

Campaign	Stakeholder	Who Enters It
JP Campaign	Job Poster	All JP contacts across all 15 paths
FH Campaign	Functional Head	All FH contacts across all paths
CHRO Campaign	CHRO / HR Head	All CHRO contacts (Stage 1 direct + Stage 2 escalation)
Founder Campaign	Founder / CEO	All Founder contacts (Stage 1 direct + Stage 2/3 escalation)

Custom Variables

Set up these custom variables in each Instantly campaign before writing email sequences:

Variable	Example	Description
Job URL	https://linkedin.com/jobs/...	Full URL of the LinkedIn job posting
Company Website	https://company.com	Company's website URL
Job Location	Mumbai, Maharashtra	Location of the job posting
Job Role	Product Manager	Cleaned job role title
Company	[Client]	Company name
Posted Date	2026-04-01	When the job was posted
Job Poster Title	Head of Talent Acquisition	JP's job title (JP campaign only)
Job Hash ID	4390427620	Unique LinkedIn job ID for tracking
Post Timing	last week	How recently the job was posted
Application Count	145	Number of applicants on the posting
Website	https://company.com	Company website (duplicate for template use)
Peer Name	Priya Sharma	Name of the simultaneously-contacted peer (empty if solo)
Peer Type	FH	Stakeholder type of the peer: JP, FH, CHRO, or empty
Peer Title	Head of Sales	Job title of the peer (empty if solo)
psLine	P.S. I've also reached out to...	Pre-built cross-mention line

Escallation	the founder	Who we'll escalate to if no reply
Stage	1	Outreach stage: 1, 2, or 3
Prior Contacts	Santanu Mondal, Mrinmoy Brahma	Names of contacts already reached out to in previous stages

Writing Email Sequences with Liquid Syntax

Instantly supports Liquid Syntax for conditional content. This allows the same campaign to handle both solo outreach and peer cross-mentions:

Cross-mention example (Email 3):

```
{% if Peer Name != " " %}
{{psLine}}
{% endif %}
```

Escalation mention example:

```
{% if Escallation != " " %}
If I don't hear back, I'll reach out to {{Escallation}} at {{companyName}}.
{% endif %}
```

Prior contacts example (for escalation stages):

```
{% if Prior Contacts != " " %}
I'd reached out to {{Prior Contacts}} at {{companyName}} but haven't heard back.
{% endif %}
```

5. Using the Google Sheet

The Google Sheet is your command center. It contains multiple tabs that track every stage of the pipeline.

Key Sheet Tabs

Tab	Purpose
Hiring Signals	Define job search criteria (your main input sheet)
Scraped Jobs	Raw job listings pulled from LinkedIn (auto-populated)
Qualified Leads	Filtered leads meeting your criteria (the main working sheet)
Campaigns	Instantly campaign names and IDs
Dashboard	Metrics and performance tracking
CRM	Response tracking from all channels
Blocklist	Company domains to skip

Hiring Signals Sheet Structure

This tab defines what jobs to target. Each row is a separate hiring signal.

Column	Purpose	Example
Scraping Code	Unique identifier for this signal (auto-filled)	All_jobs_West_Bengal
Job Title	The job position to search for	Executive Assistant, Product Manager
Industry	Industry focus	Retail Apparel and Fashion
Country/State	Geographic location	West Bengal, Maharashtra
Job URL	LinkedIn search link	https://linkedin.com/jobs/search?...
Min Employee Count	Minimum company size	10
Max Employee Count	Maximum company size	5000
Employment Type	Job type filter	Full-time

Qualification Filters

The system filters scraped jobs using three criteria:

Filter	What It Does	Recommendation
--------	--------------	----------------

Employment Type	Filters by job type (Full-time, Part-time, Contract)	Use Full-time for best quality leads
Employee Count	Filters by company size range (min-max)	Sweet spot: 10-5000 employees
Number of Applicants	Filters by how many people applied	Higher applicant count = more hiring urgency

6. The 4-Stakeholder Model

For every lead, the system follows a strict priority hierarchy when deciding who to contact first and who to escalate to:

Priority Order: JP > FH > CHRO > Founder

Stakeholder Roles in Outreach

Stakeholder	Role in Outreach	When They Get Contacted
JP (Job Poster)	Primary contact — closest to the hiring need	Always Stage 1 (if email available)
FH (Functional Head)	Department leader — oversees the role being hired	Always Stage 1 (if email available)
CHRO	HR leader — oversees all hiring	Stage 1 (if no JP) or Stage 2 escalation (if JP available, no FH)
Founder	Ultimate decision maker	Stage 1 (if only contact available) or Stage 2/3 escalation

Escalation Hierarchy

The escalation chain depends on which stakeholders are available:

Hierarchy A (JP available, no FH): JP → CHRO (10 days) → Founder (10 days after CHRO)

Hierarchy B (FH available): JP + FH → Founder directly (10 days from earliest JP/FH enrollment)

Key Rules

- If FH is enrolled at Stage 1, CHRO escalation is skipped — escalation goes directly to Founder
- If JP is available (with or without FH), CHRO escalation is always set (but only fires if FH is NOT enrolled)
- If the Founder is the only stakeholder available, they get contacted directly at Stage 1 (no escalation needed)
- If any other stakeholder is available, Founder is contacted only through escalation, never at Stage 1
- Any reply from any stakeholder kills the entire escalation chain for that lead

Escalation Cross-Mention Rules

- JP is told about the CHRO escalation (if CHRO is available)
- FH is told about the Founder escalation
- JP is NOT told about the Founder if FH is also enrolled (FH handles that mention)

7. The 15 Outreach Paths

Based on which stakeholders have valid email addresses, each lead is assigned to exactly one of 15 paths. The path determines who gets enrolled at Stage 1, who gets escalated to at Stage 2, and who at Stage 3.

Master Path Table

#	Path Label	JP	FH	CHRO	F	Stage 1	Stage 2	Stage 3
1	F	–	–	–	✓	F	–	–
2	CHRO	–	–	✓	–	CHRO	–	–
3	CHRO_F	–	–	✓	✓	CHRO	F	–
4	FH	–	✓	–	–	FH	–	–
5	FH_F	–	✓	–	✓	FH	F	–
6	FH_CHRO	–	✓	✓	–	FH + CHRO	–	–
7	FH_CHRO_F	–	✓	✓	✓	FH + CHRO	F	–
8	JP	✓	–	–	–	JP	–	–
9	JP_F	✓	–	–	✓	JP	F	–
10	JP_CHRO	✓	–	✓	–	JP	CHRO	–
11	JP_CHRO_F	✓	–	✓	✓	JP	CHRO	F
12	JP_FH	✓	✓	–	–	JP + FH	–	–
13	JP_FH_F	✓	✓	–	✓	JP + FH	F	–
14	JP_FH_CHRO	✓	✓	✓	–	JP + FH	CHRO	–
15	JP_FH_CHRO_F	✓	✓	✓	✓	JP + FH	CHRO	F

Note: Paths 3, 5, and 9 were updated: Founder is no longer enrolled at Stage 1 alongside other stakeholders. Instead, Founder is set as Stage 2 escalation. Paths 10 and 11 were also updated: CHRO is no longer enrolled at Stage 1 alongside JP. Instead, CHRO is set as Stage 2 escalation from JP.

Duplicate Contact Protection

The Compute Availability node includes email deduplication. If two stakeholders share the same email (e.g., JP is also the Founder), the lower-tier stakeholder is kept and the higher-tier is marked as unavailable. Priority: JP > FH > CHRO > Founder.

Example: If the JP email is the same as the Founder email, JP is kept (jp_avail = Y) and Founder is suppressed (f_avail = N). The lead routes to a JP-only path instead of JP + Founder.

Instantly Duplicate Prevention

All HTTP Request nodes that add leads to Instantly include `skip_if_in_workspace: true` and `skip_if_in_campaign: true` flags. This prevents the same email from being added to Instantly if it already exists anywhere in the workspace or in the specific campaign.

8. Escalation Flow

The Escalation Flow is a separate n8n workflow that runs on a schedule (daily). It checks enrolled leads for no-reply conditions and escalates to the next stakeholder in the chain.

How It Works

The escalation flow is entirely state-driven — it reads the current data from the Google Sheet and decides what to do. No single execution needs to remember anything. If a run fails, the next scheduled run picks up exactly where it left off.

26. The workflow reads all rows from the Qualified Leads sheet
27. Filters for rows that have an escalation stage set (CHRO or Founder)
28. Loops through each lead and computes:
 - days_since_stage1: Days since the earliest JP or FH enrollment
 - days_since_chro: Days since CHRO enrollment (if CHRO was enrolled)
 - any_reply: Whether any stakeholder has received a reply
 - chro_due: Whether CHRO should be enrolled now (Y/N)
 - founder_due: Whether Founder should be enrolled now (Y/N)
29. Routes to CHRO enrollment or Founder enrollment based on which is due
30. Updates the sheet with enrollment status and timestamps

Escalation Triggers

CHRO Escalation (chro_due = Y)

All of the following must be true:

- CHRO Escalation Stage exists in the sheet (set by the path assignment workflow)
- CHRO is not yet enrolled
- FH is NOT enrolled (if FH was enrolled, CHRO escalation is skipped)
- No reply has been received from any stakeholder (JP, FH, CHRO, or Founder)
- 10 or more days have passed since the earliest JP/FH enrollment date

Founder Escalation (founder_due = Y)

All of the following must be true:

- Founder Escalation Stage exists in the sheet
- Founder is not yet enrolled
- No reply has been received from any stakeholder

- **CHRO path is "done"**: Either FH is enrolled (CHRO skipped), or no CHRO stage exists, or CHRO is already enrolled
- **10+ days since the relevant clock**: If CHRO was enrolled, clock starts from CHRO enrollment. If FH is enrolled (CHRO skipped), clock starts from earliest JP/FH enrollment. If no CHRO stage exists, clock uses earliest JP/FH enrollment.

Kill Switch

A reply from ANY stakeholder (JP, FH, CHRO, or Founder) immediately stops all further escalation for that lead. The any_reply check looks at all 4 reply status columns. Once any of them is non-empty, both chro_due and founder_due return N.

9. Executing the Workflows

The system has 10 campaign automation buttons embedded directly in the Google Sheet menu bar. These buttons trigger the corresponding n8n workflows.

Workflow Execution Order

The workflows must be run in a specific sequence. Each workflow depends on the output of the previous one.

#	Button	What It Does	When to Run
1	Run Full Campaign	Runs all workflows in sequence automatically	Primary button for daily operations
2	Run LinkedIn Scraper	Scrapes LinkedIn for matching job postings	When adding new hiring signals
3	Run Qualification	Filters scraped jobs by employee count, employment type, applicants	After scraping is complete
4	Find out JP Emails	Finds email addresses for all Job Posters (bulk AnyMail Finder)	After qualification
5	Find out FH Emails	Finds emails for Functional Heads based on job function	After JP emails
6	Find out CHRO Emails	Finds emails for CHROs/HR leaders	After FH emails
7	Find out Founder Emails	Finds emails for company Founders/CEOs	After CHRO emails
8	Add Leads to Campaigns	Routes leads to 15 paths and enrolls into Instantly	After all emails are found
9	Refresh Campaigns List	Updates campaign names and IDs in the Campaigns tab	When you create new campaigns in Instantly
10	Map Campaign Fields	Fills campaign name and ID columns across all sheets	If campaigns were not selected before running

Note: Buttons 1-8 should be run in order. Buttons 9 and 10 are utility functions that can be run anytime.

Manual vs Automated Execution

Each workflow can be triggered in two ways:

- **Manual:** Click the corresponding button in the Google Sheet menu bar, or run the workflow manually from the n8n UI
- **Automated:** The system runs all workflows automatically on a daily schedule. You do not need to click anything — the daily run handles everything

The buttons exist as a fallback for when you need to re-run a specific step (e.g., after fixing an error) or when testing new hiring signals.

10. Understanding the Automated Flows

Daily Automated Run

The system runs automatically every day. The daily sequence:

31. LinkedIn Scraper runs — pulls all jobs matching your hiring signals from the past 24 hours
32. Qualification runs — filters by employee count, employment type, and applicant count
33. JP Email Finder runs — bulk email lookup for all Job Posters
34. FH Email Finder runs — finds Functional Head emails by job function
35. CHRO Email Finder runs — finds HR leadership emails
36. Founder Email Finder runs — finds Founder/CEO emails
37. Add Leads to Campaigns — computes paths, enrolls Stage 1 contacts, pre-populates escalation data
38. Escalation Flow runs — checks all enrolled leads for 10-day thresholds and escalates where needed

Email Flow After Enrollment

Once leads are added to Instantly campaigns:

- **Day 0:** Initial email sent to Stage 1 contacts
- **Day 1-4:** Follow-up emails per your Instantly sequence
- **Day 10:** If no reply from any stakeholder, escalation workflow enrolls the next stakeholder (Stage 2)
- **Day 20:** If still no reply, Stage 3 stakeholder enrolled (if applicable)
- **Anytime:** If any stakeholder replies, the entire escalation chain stops

11. Campaign Automation Buttons

The following buttons are embedded in the Google Sheet menu bar under "Campaign Automations". Each button triggers a specific n8n workflow directly from the sheet.

Button 1: Run Full Campaign

Executes all workflows in sequence (Scrape → Qualify → Find Emails → Add to Campaigns). This is the primary button for daily operations. Use this when you want to run the entire pipeline end-to-end.

When to use: *Daily operations or when testing a complete run with new signals.*

Button 2: Run LinkedIn Scraper

Triggers the LinkedIn Job Scraper workflow. Pulls job postings from LinkedIn based on your hiring signals. Jobs are saved to the Scraped Jobs tab.

When to use: *After creating new hiring signals, or to re-scrape if the daily run missed something.*

Button 3: Run Qualification

Runs the Qualification workflow. Filters scraped jobs by: employment type (e.g., Full-time only), employee count range (e.g., 10-5000), and number of applicants. Qualified leads are moved to the Qualified Leads tab.

When to use: *After scraping is complete, or if you've changed qualification filters.*

Button 4: Find out JP Emails

Runs the JP Email Finder. Uses AnyMail Finder's bulk lookup to find email addresses for all Job Posters. Updates the JP - Email and JP - Email Status columns.

When to use: *After qualification. This is usually the first email finder to run.*

Button 5: Find out FH Emails

Runs the FH Email Finder. Finds email addresses for Functional Heads based on the job function category (e.g., if the job is in Sales, it searches for the Head of Sales). Updates FH columns.

When to use: *After JP emails are found.*

Button 6: Find out CHRO Emails

Runs the CHRO Email Finder. Searches for senior HR leadership (CHRO, VP HR, Head of People) at each company. Updates CHRO columns.

When to use: *After FH emails are found.*

Button 7: Find out Founder Emails

Runs the Founder Email Finder. Searches for company Founders, CEOs, and Co-Founders. Updates Founder columns.

When to use: *After CHRO emails are found.*

Button 8: Add Leads to Campaigns

Runs the Add Leads to Multiple Paths workflow. For each qualified lead, it: computes stakeholder availability, assigns one of 15 outreach paths, enrolls Stage 1 contacts into the correct Instantly campaign, pre-populates escalation data in the sheet, and updates campaign assignment status.

When to use: *After all email finders have completed.*

Button 9: Refresh Campaigns List

Fetches the latest campaign names and IDs from Instantly and updates the Campaigns tab in the Google Sheet. The dropdown selections in the Hiring Signals tab pull from this list.

When to use: *Whenever you create, rename, or delete campaigns in Instantly.*

Button 10: Map Campaign Fields

Fills the campaign name and campaign ID columns across all relevant sheets. Useful if you forgot to select campaigns before running the pipeline, or if campaign IDs have changed.

When to use: *If campaign columns are empty after running the system manually.*

12. Monitoring & Dashboard

Dashboard Sheet

The Dashboard tab auto-updates with key metrics to help you monitor campaign performance.

Key Metrics

- **Jobs Posted by Qualified Companies:** Shows which companies are posting the most jobs — high-volume posters indicate strong hiring urgency
- **Job Posters:** Identifies individuals posting multiple jobs — these are high-value targets for relationship building
- **Leads Added to Instantly:** Campaign-level breakdown of how many leads have been enrolled
- **Escalation Activity:** Tracks how many leads have been escalated to CHRO and Founder

CRM Sheet

All responses from Instantly populate here automatically. Key columns:

Column	Description
Name	Lead contact name
Company	Their company name
Platform	Where the response came from (Instantly)
Campaign	Which of the 4 campaigns they replied from
Reply	Their response text
Date	When they replied
Status	Classification: Interested / Not Interested / Follow-up

Blocklist Sheet

Prevents re-contacting companies. Add a company domain when:

- They become a customer
- They explicitly request no further contact
- They are in an active sales conversation
- They have already been thoroughly contacted across all stakeholders

13. Troubleshooting

Button doesn't work / doesn't respond

Cause: Hiring signal row not fully configured, or n8n workflow is inactive

Solution: Ensure all required columns are filled in the Hiring Signals tab. Check that the corresponding n8n workflow is active and the webhook URL is correctly linked to the button.

No items scraped (shows 0)

Cause: LinkedIn search returned no results, or search criteria too narrow

Solution: Try broader job titles (e.g., "Manager" instead of "Senior Regional Manager"). Expand the location. Manually verify the LinkedIn URL shows results when opened in a browser.

Qualified leads shows 0 after scraping

Cause: Employee count range too restrictive, or employment type filter doesn't match

Solution: Widen the employee count range (try Min 1, Max 10000). Check that the employment type matches what's being posted (Full-time vs Contract).

Emails not found for most leads

Cause: Normal — not all contacts are findable via email lookup

Solution: Expect 40-60% email discovery rate for JP, lower for FH/CHRO/Founder. This is normal. Leads without emails are skipped or routed to paths that use available contacts only.

JSON parameter needs to be valid JSON (HTTP Request error)

Cause: Special characters in lead data (quotes, newlines) breaking the JSON body

Solution: Check the lead data flowing into the failing node. Look for fields with double quotes or newline characters. The Job Poster Title field is the most common culprit.

Leads not appearing in Instantly

Cause: Campaign IDs incorrect, or Instantly API key expired

Solution: Verify campaign IDs in the n8n workflow match the actual campaigns in Instantly. Test the API key. Check if skip_if_in_workspace filtered them as duplicates.

Escalation not firing after 10 days

Cause: Reply status columns populated (kill switch active), or escalation stage not set

Solution: Check if any reply status column has a value for that lead. Check if the CHRO/Founder Escalation Stage column is populated. Verify the escalation workflow is active and running on schedule.

Same person enrolled in multiple campaigns

Cause: Two stakeholders have the same email, dedup not active

Solution: The Compute Availability node should have email dedup logic. If missing, add String() comparisons to suppress duplicate emails (see the dedup expressions in the workflow documentation).

14. Quick Reference

Daily Checklist

Every Day:

- Check CRM sheet for new replies
- Review any escalation activity
- Note patterns (which industries, job roles, or company sizes respond best)

Weekly:

- Review Dashboard metrics
- Check email open/click/reply rates in Instantly
- Identify high-performing signals (double down)
- Identify low-performing signals (adjust or pause)
- Update blocklist if needed

As Needed:

- Create new hiring signals for new job titles or locations
- Create new campaigns in Instantly (then run Refresh Campaigns List)
- Refine email copy based on reply patterns
- Adjust employee count ranges or qualification filters

Campaign Automation Buttons Quick Reference

#	Button	What It Does
1	Run Full Campaign	Runs entire pipeline end-to-end
2	Run LinkedIn Scraper	Scrapes LinkedIn for jobs
3	Run Qualification	Filters by employee count, type, applicants
4	Find out JP Emails	Bulk email lookup for Job Posters
5	Find out FH Emails	Finds Functional Head emails
6	Find out CHRO Emails	Finds HR leadership emails
7	Find out Founder Emails	Finds Founder/CEO emails
8	Add Leads to Campaigns	Routes to 15 paths, enrolls in Instantly
9	Refresh Campaigns List	Syncs Instantly campaigns to sheet
10	Map Campaign Fields	Fills campaign name/ID columns

Escalation Quick Reference

Scenario	What Happens
JP only, no FH, CHRO available	JP enrolled → 10 days → CHRO enrolled → 10 days → Founder enrolled
JP + FH enrolled, no CHRO path	JP + FH enrolled → 10 days → Founder enrolled directly
JP + FH enrolled, CHRO available	CHRO escalation skipped (FH enrolled), Founder after 10 days from JP/FH
Only Founder available	Founder enrolled directly at Stage 1 (no escalation)
Any stakeholder replies	All escalation stops immediately for that lead
